

Locker Vending Machines

Available in ambient, refrigerated or frozen variations. A locker system means you can sell larger items than you can fit in a typical vending machine. Our temperature variations mean almost any product can be sold. Our system enables reserved item purchases using a unique purchase code for a single customer. The locker systems can be paired together and with our ambient or refrigerated Dfresh machine to create an integrated solution with a single control and payment terminal

Each of our Locker systems have a typical lead time of 8-12 weeks from point of order

Depending on the configuration, you could have 100's of products. Our machines can be configured in tandem, One terminal and multiple machines joined together

Locker systems should be wiped clean weekly, or if any product is spilt or damaged as soon as that occurs. Other daily operation consists of refilling and function checks only

13 amp, Need only a regular power outlet for each of our locker unit

Coin acceptor, coin mechanism & contactless card reader including Phone payment feature
